Index for The Computer Journal, Volume 34

1. Index of titles of Papers, etc

A Controlled Environment for Meta-Message Processing 331
A DAP FORTRAN Subroutine for Thinning Digitised Pictures 377
A Framework for Building Dependable Systems 173
A Longest Path Algorithm to Display Decision Tables 358
A Mergeable Double-ended Priority Queue 423
A Model for the Stability Analysis of Maintenance Strategies for Linear List 80
A Modification of Sale's Algorithm to Accommodate FORTRAN 77 373
A Neural Network Simulating System 92
A New Technique for Self-Organising Linear Searches 450
A Note on the Efficiency of an Interval Routing Algorithm 475
A Parallel Prolog Abstract Machine and its Multi-Transputer Implementation 52
A Query Language for Retrieving Information from Hierarchic Text Structures 254
A Structured Semantic Design of Distributed Operating Systems 482
A Survey of Exploratory Software Development 153
A Survey on Binary Tree Codings 438
Adaptive Deadlock-free Packet Routing in Transputer-based Multi-processor Interconnection Networks 493
Additional papers 571
An Adaptive Overflow Technique to Defer Splitting in B-trees 397
An Efficient Starvation-Free Semaphore Solution for the Graphical Mutual Exclusion Problem 345
An Examination of Requirements Specification Languages 143
An Introduction to Knuth–Bendix Completion 2
Announcements 87, 91, 94, 121, 142, 152, 163, 181, 185, 238, 244, 271, 286, 344, 349, 381, 414, 437, 454, 468, 476, 477, 492, 541, 550, 558, 565
Autodescriptivity: beware! 380

Book Reviews 15, 41, 187, 188, 194, 301, 319, 357, 396, 422, 474, 521, 533, 573

Comparative Performance of Overlapping Connectivity Multi-processor Interconnection Networks 207
Concurrent Object-Oriented Programming in Lisp 311
Constraint Maintenance as a Data Model Design Criterion 73
Constructive Rewriting 34
Correspondence 72, 206, 264, 310, 405, 427, 502, 513

Default Databases and Incomplete Information 239
Design Approaches: A Comparative Study of Information System Design and Architectural Design 215
Development Methods for Real-Time Systems 164

Editorial 1, 97, 193, 289, 385, 481
Efficient Dissemination of Information in Computer Networks 534
Efficient Generation of Rotational–Admissible Codewords for Binary Trees 379
Efficient Two-Dimensional Fast Fourier Transform Subroutines for Real-Valued or Hermitian data 362
Empirical Study of the Expected Running Time of Shellsort 88

Fault-tolerant Reference Counting for Garbage Collection in Distributed Systems 503
Finding a Majority When Sorting is Not Available 186

HIDEL: A Language for Hierarchical VLSI Design 195
High Storage Utilisation for Single-Probe Retrieval Linear Hashing 455

Implementation of Flexible Arrays Using Balanced Trees 386
Implementation of Karp–Luby Monte Carlo Method: An Exercise in Approximate Counting 279
Implementations of Term Rewriting Systems 20
Improved Partial-Match Search Algorithms for BD Trees 415
Improved Recursion Handling through Integrity Constraints 282
Information Systems Design Methodologies – Book Reviews 182
Information Systems Development Research: An Exploration of Ideas in Practice 98
'Innovation for Failure' – Some Reflections on the Work of the NRDC Relevant to the Early History of the Computer Industry in the UK 272
Integrating Human-Computer Interaction with Jackson System Development 132
I-Pigs: an Interactive Graphical Environment for Concurrent Programming 320

Linear Probing Sort 370
Logic Programming for Software Verification and Testing 350

Manipulating Full-text Scientific Databases: A Logic-based Semantico-pragmatic Approach 245
Methodologies from Machine Learning in Data Analysis and Software 559
Mu-balancing M-way Search Trees 406
Multimedia Information Systems – The Management and Semantic Retrieval of all Electronic Data Types 225

Notices 188

On the Design of a Machine-Independent Perfect Hashing Scheme 469
Order-sorted Term Rewriting 16
Ord–Smith's Pseudo-Lexicographical Permutation Procedure is the Tompkins–Paige Algorithm 569

Performance of Priority Queue Structures in a Virtual Memory Environment 428
Practical Concurrent Programming for Parallel Machines 302
Prolog in Practical Compiler Writing 64

Reduction and Narrowing for Horn Clause Theories 42
Representing Business Policies in the Jackson System Development Method 122

Seven Ways to Develop Office Systems: A Managerial Comparison of Office System Development Methodologies 113
Structure Clashes 566

The Coordinatation of Distributed Active Messages in a Dynamic Network Topology 542
The Design of a System for Distributing Shared Objects 514
The HDG-Machine: a Highly Distributed Graph-Reducer for a Transputer Network 290
Threshold Values for Processing Distributed Queries 551

Unity Doesn't Imply Unification *or* Overcoming Heterogeneity Problems in Distributed Software Engineering Environments 522

Weighting Without Waiting: the Weighted Path Length Tree 444
When does a Mouse become a Rat? or ... Comparing Performance and Preferences in Direct Manipulation and Command Line Environment 265
Wilkes Award 112

2. Index of Authors and Other Contributors

Agrawal, D. and Malpani, A. 534
Akman, V. 279
Ancona, M., Clematis, A., De Floriani, L. and Puppo, E. 195
Argo, G. 444
Avison, D. E. and Wood-Harper, A. T. 98

Bastani, F. B., Chen, I.-R. and Hilal, W. 80
Bodorik, P. and Riordon, J. S. 551
Bradford, R. *see* Padget, J.
Brink, C., Rewitzky, I. M. and Schmidt, R. A. 380
Burn, G. L. *see* Kingdon, H.
Burns, A. and Lister, A. M. 173

Campbell, D. and McNeill, T. 186
Challab, D. J. 386
Chang, C. C., Chen, C. Y. and Jan, J. K. 469
Chen, C. Y. *see* Chang, C. C.
Chen, I.-R. *see* Bastani, F. B.
Cheng, S.-T. *see* Wu, J.-L.
Clematis, A. *see* Ancona, M.
Clint, M. *see* Stewart, A.

Dandamudi, S. P. and Sorenson, P. G. 415
Daskalakis, C. N. *see* O'Docherty, M. H.

3. Index of Topics, etc

Abstract parallel machine 290
Abstraction 164
Access methods 397
Action research 98
Action systems 302
Active messages 542
Adaptive reorganisation 397
Algorithms 406, 415, 444
Application architecture 514
Application software 522
Architectural design 215
Architecture independent proprammming languages 302
Architectures 173
Artificial intelligence 52
Artificial intelligence programming 153
Attribute grammars 64
Augmented data manipulator network 207
Autodescriptivity 380

Ballot sequence 438
Bandwidth 207
Baseline network 207
BD tree 415
Binary search trees 444
Binary trees 379, 438
Book reviews 182
Boolean formulas 279
B-trees 386, 397, 406, 428
Business policy 122

CASE 182
Cellular automation 52
Client-server model 80
Closed world assumption 239
Code generation 64
Codeword 379
Compiler construction 64
Completion 20
Computational complexity 475
Computer hardware description languages 195
Computer networks 534, 542
Concurrent maintenance 80

Concurrent programming 302, 311, 320, 345
Conditional reduction 42
Consistent sharing of objects 514
Constraint maintenance 73
Constructive rewriting 34, 42
Content retrieval 225
Content scanning 245
Contingency 98
Coordination Model 542
Cooperating processes 331
Correcting query processing strategies 551
Counting 279
Critical success factors 113
Crossbar switch network 207
CSCW application platform 514
CSP 302

DAP FORTRAN 377
Data flow computing 52
Data model design 73
Data models 225
Data structure maintenance policy 80
Data structures 195, 397, 423, 428, 444
Database constraints 73
Databases 282, 397, 415
Dataflow 302
Deadlock 207, 331, 345, 493
Deap 423
Decision rules 559
Decision tables 358
Decision-to-decision graph 350
Deductive databases 239
Definite clause grammar 64
Degradable systems 80
Delta networks 207
Dependability 173
Design 215
Design and analysis of algorithms 475
Design criteria 73
Design procedure 73
Design process 215
Dialogue design 132
Digitised pictures 377
Directed acyclic graph 282
Disjunctive normal form 279
Display design 132
Distributed active messages 542
Distributed algorithms 475
Distributed computer networks 475
Distributed databases 551
Distributed hardware 482
Distributed objects 514
Distributed systems 80, 503, 522, 534, 542
Distribution 173, 290, 311
Dynamic (adaptive) query processing 551
Dynamic networks 542
Dynamic state information 331
Dynamic storage allocation 386

EDDA 143
Electronic mail 542
Equational reasoning 2, 16, 20
Equational theories 2, 16
Equivalence class 186
Event list 428
Experimental evaluation 265
Experimental measurements 428
Expert systems 245
Exploratory programming 153

Fast Fourier transform 362
Fault-tolerance 503, 534
File organisation 397
File structures 415
Flexible arrays 386
Fluid approximation model 80
Formula rewriting 34
FORTRAN 77 373
Fragmentation 386

Full-text databases 245
Functional simulation 195

Gamma networks 207
Garbage collection 503
Garbage collection algorithms 80
Goal 215
Goal reduction 42
Graphical interface 320
Graphical languages 320
Graphs 195, 215

Hashing 455, 469
HCI methods 132
Heap 423, 428
Heapsort 88
Height-balancing 406
Heterogeneity 522
Hierarchical models 195
HOOD 164
Hopfield net 92
Horn clauses 42
HOS 143
Human activity systems 98
Human computer interaction 132, 265
Human computer interface 98
Human interface preferences 265
Hypercube 493
Hypermedia 225
Hypertext 245

ICL DAP 377
Image databases 225
Implementation 113
Incomplete information 239
Index sequential access 397
Index sequential files 406
Indexing 397
Information analysis 132
Information extraction 331
Information modelling 98
Information processing 331
Information retrieval 254
Information systems 98, 122, 225
Information systems design 215
Information systems development methodologies 113
Information transferring 331
Insertion costs 455
Integrity constraint 282
